President

Re: **Whitchall Ferry Terminal**  
**Photovoltaic System**

Dear Mr. Sorgento,

It is on outstanding performances that we acknowledge service such as the work you performed on the Photovoltaic System at the above-mentioned location.

You were retained by Atlantis Energy from California to "commission" the two (2) Photovoltaic Systems that were inoperable after being installed, as per their "Approved" installation drawings.

Your preliminary testing and discovery that two different Photovoltaic Grid System Panels were furnished and installed by others prior to our wiring were the root problem. Your engineering and direction to correct this installation, which included numerous inverter changes, allowed us to correct the installation in an extremely efficient manor. This was followed by your testing, programming and commissioning of the System.

Your efforts in this matter have not gone unnoticed by the New York City Economic Development Corporation (the Builder) and the Department of Transportation (the Owner) of this Manhattan Terminal of the Staten Island Ferry.

Please accept our "Thank you" and "Job well done". We look forward to doing future projects with your firm.

Very truly yours,  
FIVE STAR ELECTRIC CORP.

  
Peter Amabile, Jr.  
Vice President
