RE: Solar System

Dear Jerry,

I'd like to take this opportunity to thank you for providing us with a very thorough understanding of the installation and overall benefits of a solar powered system for our home.

We have had the system in operation since January 2006 and we have most assuredly reaped the benefits of the system. Until recently, our electric bills from JCP&L have been less than \$5.00 each month. In fact, one of our bills was an "estimate" at \$5.00 and after calling the utility with an actual reading from our meter, the bill actually was reduced to a whopping \$2.18!!!

The bill for the month of June was a bit more, at \$152. However, taking into consideration that this covered a period where our pool filter was running 6-8 hours each day and with company visiting the air conditioner was running full blast every day, I believe this is extremely low. Last year around the same time, our electric bill for pool and air conditioner usage was over \$700! It should also be noted that last year the air conditioner was running much less as we were trying to conserve by having the temperature in the house at a higher level. This year we are able to enjoy the cool temperatures without paying the utility company an outrageous amount of money.

Again many thanks for a very pleasant and cost effective experience.

Kindest regards.

Sincerely,

***Sherri Moslowitz-***
